Architectural diffusers

## Linear diffuser

LENOX

### Description

LENOX is an architectural linear diffuser, used to introduce or evacuate air.

The diffuser is an elegant and practical ventilation solution, and the design of the product determines a high level of induction rate.

LENOX integrates fully into the ceiling and is recommended for residential spaces, conference rooms, offices, classrooms, etc.

### Technical specifications

#### Characteristics

The diffuser is made with a linear slot, centrally positioned, with the following dimensional options: 25, 38, 51 or 64 mm.

The diffuser blades are segmented to a maximum length of 635 mm and allow multiple positioning options (up, down, center...) thus obtaining the direction of the air jet in the desired direction.

The blades are sliding and easily adjustable from the front of the diffuser.

Dimensional limits, diffuser length: minimum 0.3m and maximum 3m.

In the case of diffusers with a length > 3m, the execution is modular, and the product is delivered together with the necessary connecting parts (alignment strips).

Depending on the overall position, the modular parts are built without termination elements (caps), or with a single element - see assembly sections.

Perimeter configurations can be made by using corner sections (angle 90° and 135°).

Corner elements are inactive.

The product is delivered with the following elements: "U" type mounting system (bracket), fixing screw and masking cover for the screw.

The number of mounting systems depends on the length of the product.

## Materials

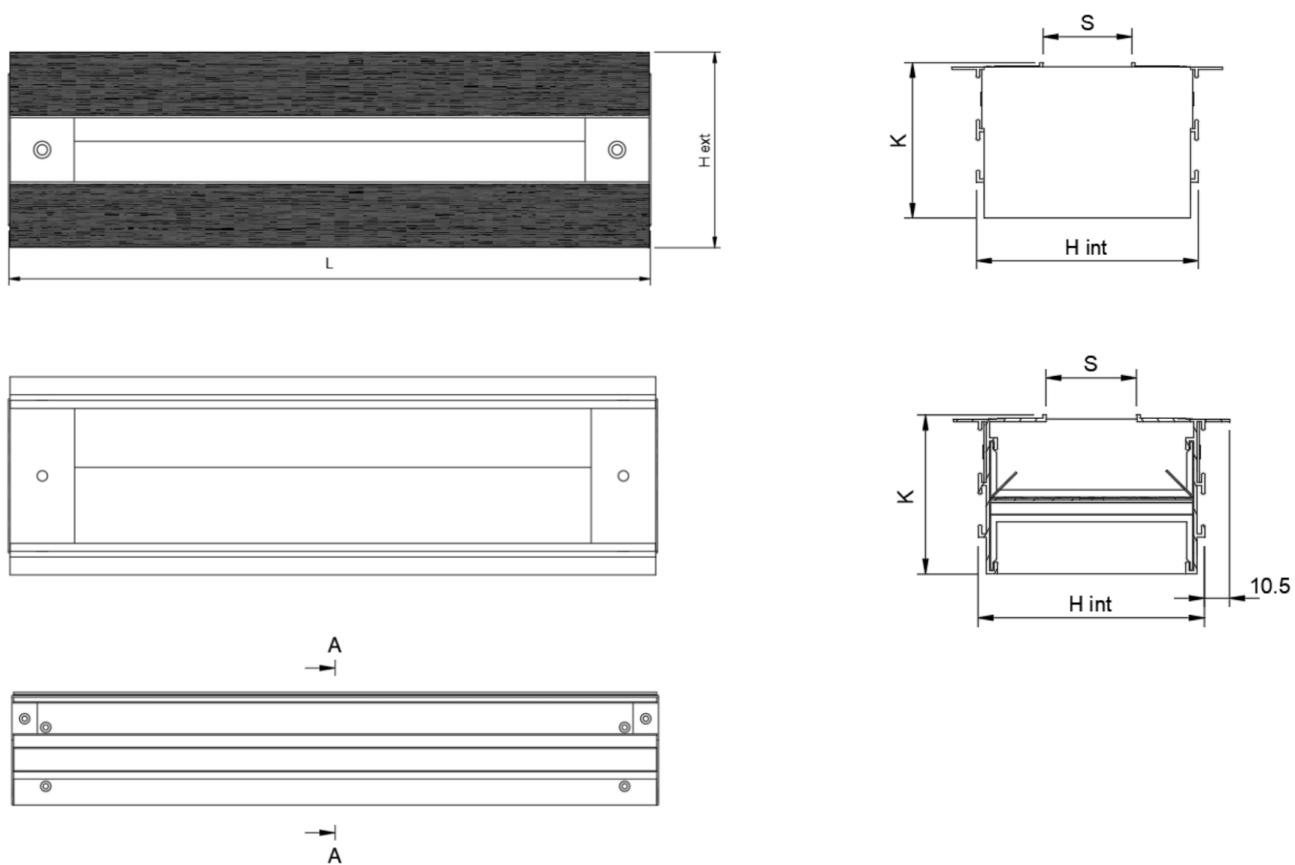

The diffuser is made of black anodized aluminum.

The blades are made of galvanized steel sheet electrostatic field painted in RAL 9005.

Other RAL colours are available on request.

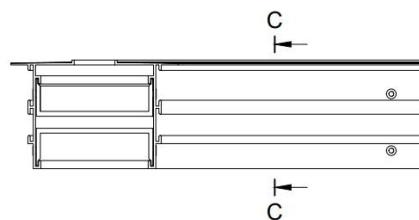

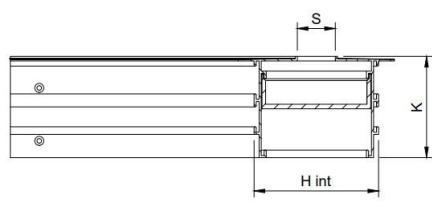

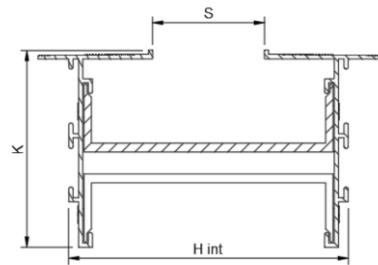

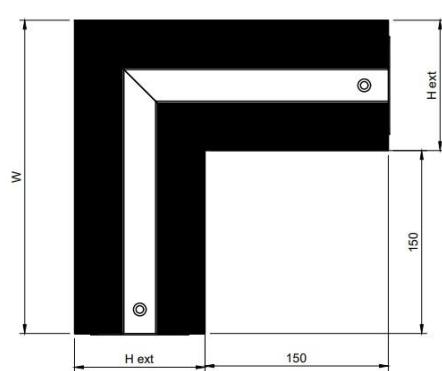

## Technical drawing

LENOX - 135 ° angle

## Product specifications

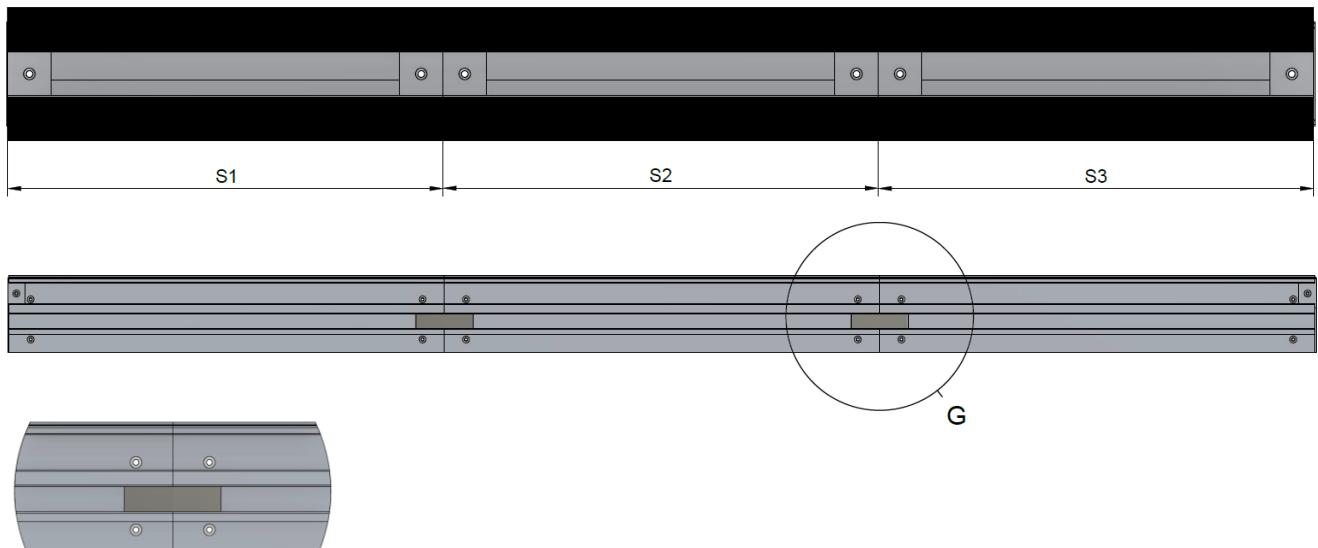

## Directing the air jet

## Section assembly

Long-length diffusers are made of modules with a maximum length of 3 m. In this case, the product is delivered with connecting elements between modules.

G – Mounting detail (connecting elements)

## Accessories

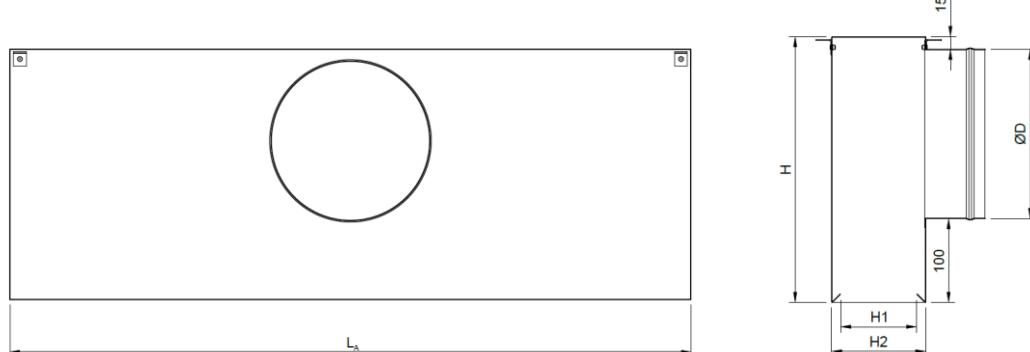

The diffuser can be supplied with a plenum connecting to a circular duct with horizontal connection.

The plenum is provided with suspension elements (lugs) and bead roll on the spigot, for easy fixing of the flexible duct.

The plenum is delivered insulated or uninsulated.

Optionally, a perforated damper can be mounted on the plenum connection to balance the air flow.

## Adapter (plenum box)

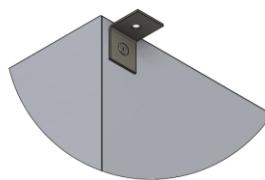

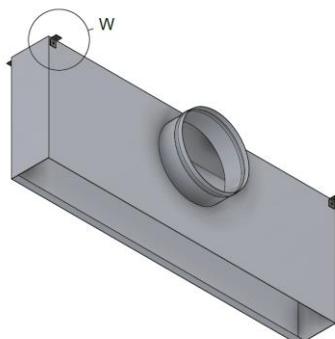

$$L_A = L_{LENOX} + 4$$

$$H1 = H_{int\ LENOX} + 2$$

$$H2 = H1 + 16$$

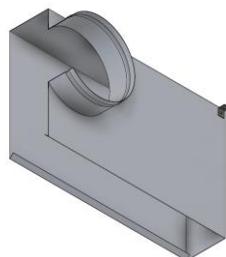

$$H - \text{depending on } \varnothing D$$

The adapter is made of Z140 galvanized steel sheet and is equipped with suspension lugs.

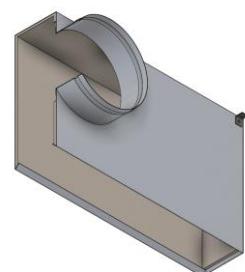

W - Suspension lug

On request, the plenum can be insulated with 6 mm thick elastomeric rubber.

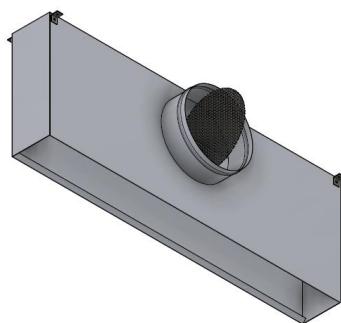

AN - Uninsulated adapter

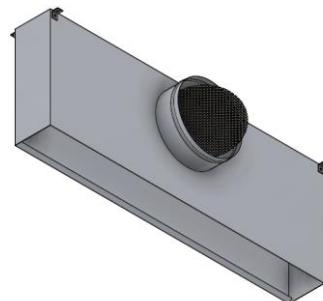

AIZ - Insulated adapter

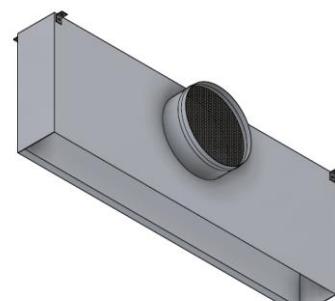

Perforated damper

Position 0°

Position 45°

Position 90°

The perforated damper is mounted on the adapter spigot and has the role of balancing the air flow.

## Functional parameters

Note: The values provided are for the grille-plenum assembly.

#### The legend

ØD [mm] - Diameter plenum

X [m] - The length of the air jet at a speed of 0.5 and 0.25 m/s

NR [dB (A)] - Noise level considering room attenuation of 10 dB

Pt [Pa] - Total pressure loss

Ps [Pa] - Static pressure loss

## Installation

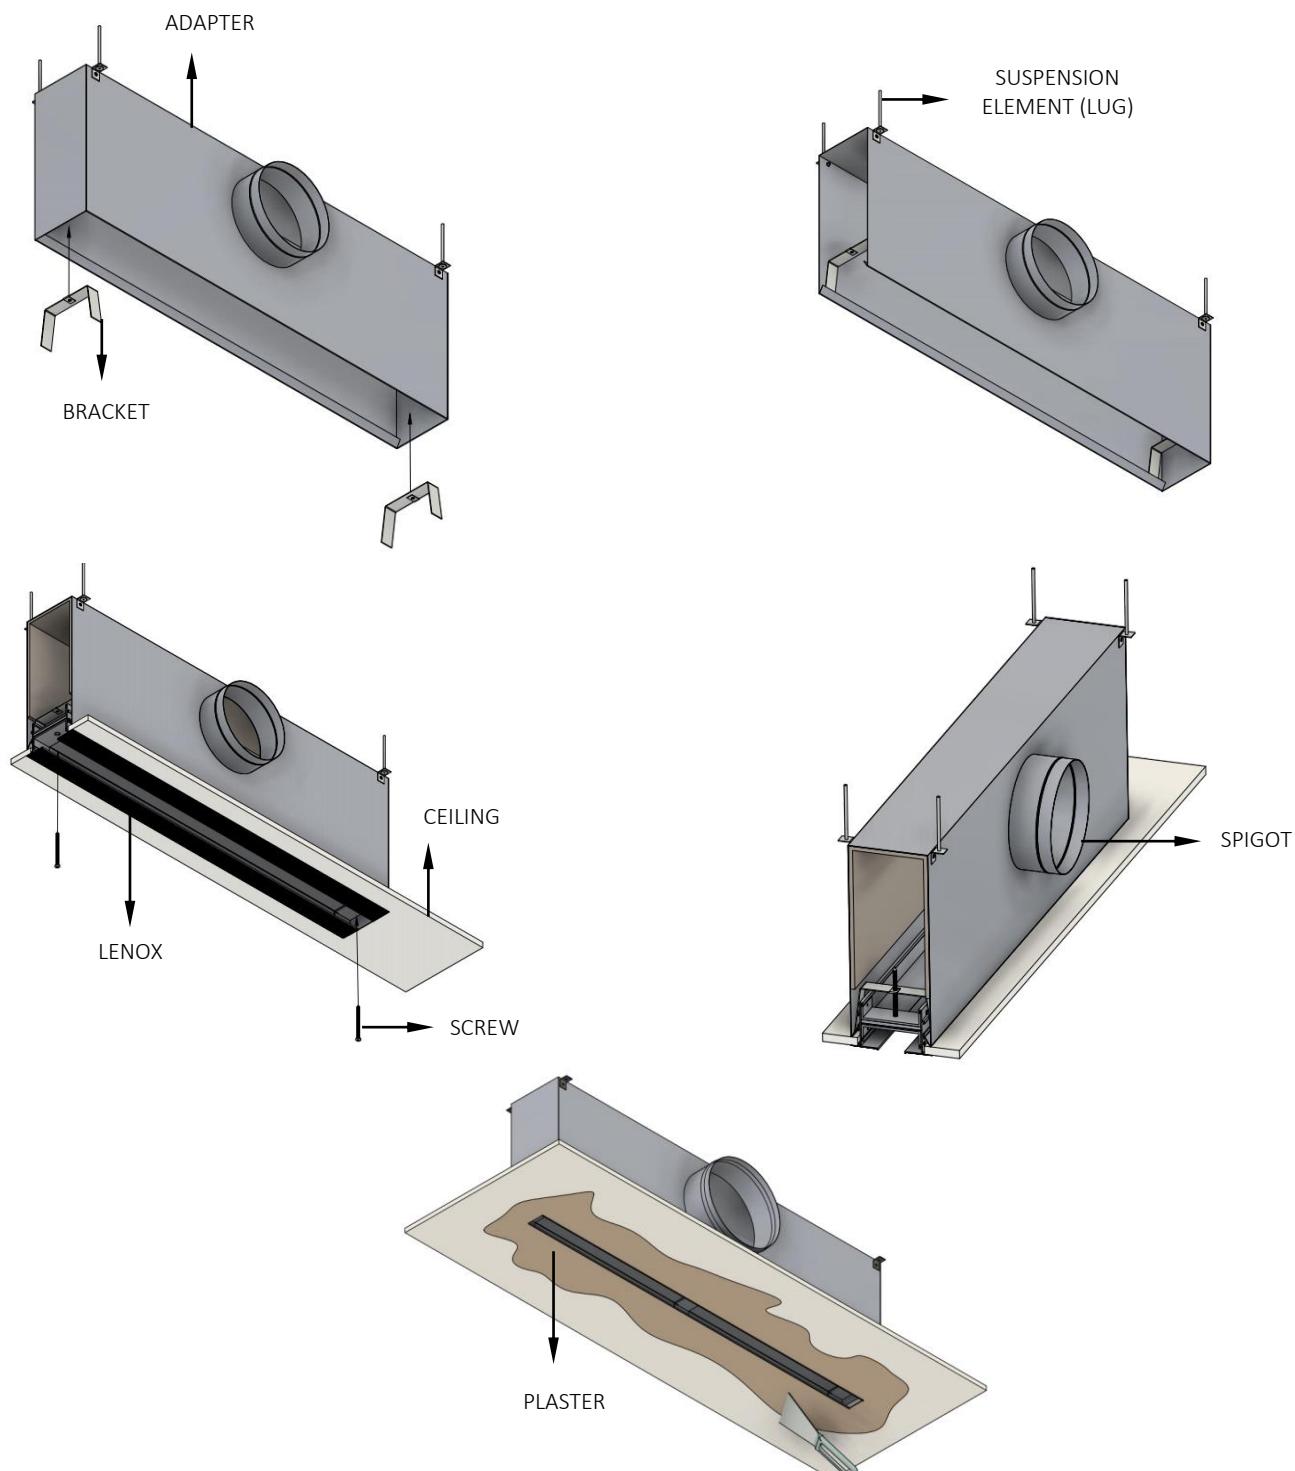

The diffuser is mounted in a false continuous ceiling or on the wall.

The fixing of the plenum diffuser is done by means of "U" type mounting systems (bracket), positioned inside the plenum and the screws.

If the product does not have a functional role (inactive transition sections) or is installed on the wall, then a "T" profile can be used to fix the diffuser. This profile is requested separately.

After fixing, apply gypsum plaster (adhesive) over the diffuser frame and then apply wall paint.

### Installation in continuous ceiling

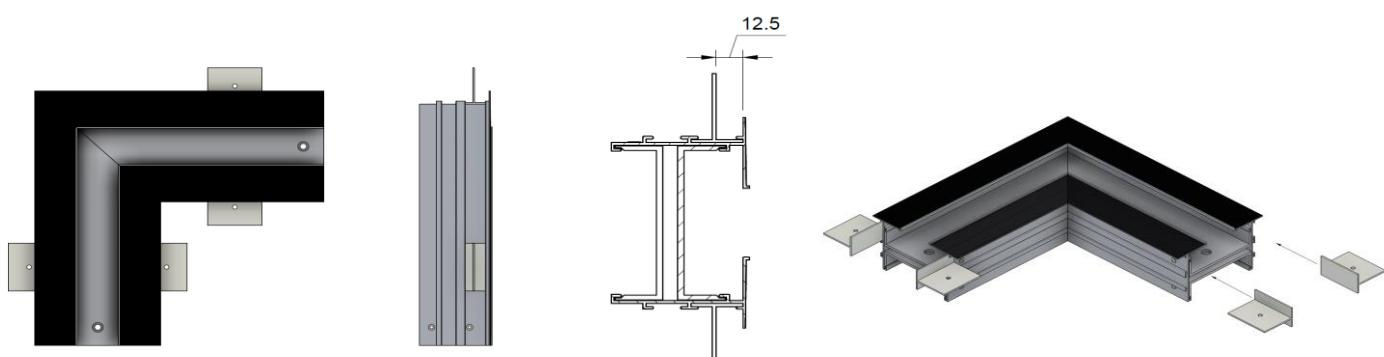

Wall mounting and transition sections (no functional role)

The "T" profile is ordered together with the LENOX diffuser and is installed by the manufacturing department in the diffuser. The positioning of the "T" profile on the diffuser channel is done according to the thickness of the gypsum board (12.5 or 9.5 mm). The gypsum board thickness is specified by the customer when ordering.

Fixing corner element (angle) in the ceiling

The corner elements, angle 90° and 135° are equipped by the production with "T" profile for gypsum thickness 12.5 mm. On request, they can be delivered with a "T" profile for gypsum thickness 9.5 mm.

## Order code
