Flexible duct

Insulated flexible duct TF-IZ

Description

Insulated flexible ducting is used in ventilation and air conditioning systems for air supply.
The insulated duct prevents condensation and minimizes heat or cold losses in the installation.

Technical specifications

Characteristics

The insulated duct consists of a flexible inner tube, a layer of glass wool insulation and a high-strength outer shell.

The duct is made in accordance with EN13180.

The duct can be easily installed on the round or oval connecting parts.

The temperature range is $-30^{\circ}\text{C} \div +140^{\circ}\text{C}$ and the pressure is up to $+2000 \text{ Pa}$.

The maximum operating air velocity is 20 m/s .

The flexible duct has a length of 10 m/piece .

Dimensional range: $\varnothing 102 \text{ mm} \div \varnothing 508 \text{ mm}$.

Materials

The inner duct and outer shell are made of multiple layers of aluminum and polyester.

The inner duct contains a high-strength carbon steel spiral, closed between layers.

The insulation is made of 25 mm thick glass wool and is yellow.
