Round non-return damper RS-G

Description

RS-G is a circular non-return (backdraft) damper, used between circular duct sections and allowing a single direction of air flow.

The RS-G damper is designed for ventilation duct systems that require a class D seal according to EN 12237.

The circular non-return damper is mounted between the ventilation ducts and allows a single direction of air flow.

This damper is often installed upstream of an introduction or evacuation of air unit to prevent the air backflow.

Technical specifications

Characteristics

The damper blades open when overpressure/airflow acts on them.

The damper is provided with a sealing gasket, butterfly blades and a return spring that closes the blades when the pressure drops.

Closing the blades prevents the return of air to the duct.

The damper closure has an approximate class 2 tightness according to EN1751: 2002.

Dimensional range: Ø100, Ø125, Ø150, Ø160, Ø200, Ø250, Ø300, Ø315, Ø355, Ø400, Ø450, Ø500.

Materials

The cylinder is made of galvanized steel sheet. The blades are made of aluminum sheet.
